

INSIDE FIT

SIX POINT MEASURE

print this page and follow the instructions

Important

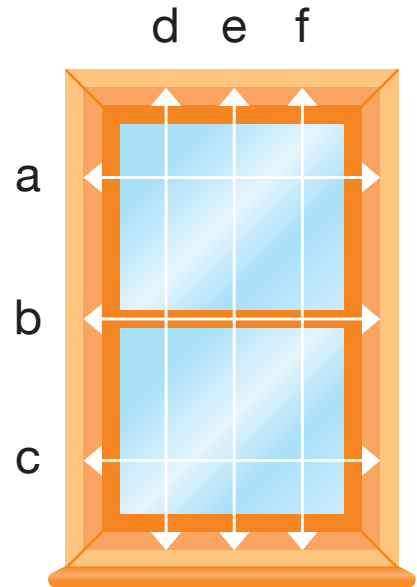

We require the exact inside frame to frame measurement's in millimetres for both the width and length in three different positions as demonstrated in the illustration.

Do not take off anything from these measurements.

Helpful hints

When measuring, always look out for things like window handles, or anything that could obstruct the blinds easy operation. This way you will be sure of a perfect fit.

Remember a blind fitted inside your widow frame will be sitting over part of your window when fully opened/pulled up and it will affect the amount of light coming through the window. Blinds can be fitted into the face of your window frame or wall, or into the top of the window frame. Always specify width first then length.

Measure window width (mm)

All six measurements are required

a	_____
b	_____
c	_____

Measure window length (mm)

All six measurements are required

d	_____
e	_____
f	_____
